Evaluation of Cohen 1998's Biphasic Model

Rahul Yerrabelli, Alexander Spector

December 29, 2021

1 Introduction

Taking Cohen's biphasic model and comparing Cohen's analytic solution with our numerical results. [**?**]. As there is a discrepancy, take the case of $C_1 = C_2$ to prove which is correct.

2 Key property of $C_1 = C_2$

If $C_1 = C_2$ (because $\nu_{31} = \pm\sqrt{1/2}$), then:

$$\frac{\widetilde{F(s)}}{\tilde{\varepsilon}_{zz}(s)} = \frac{C_1 I_0\left[\sqrt{s}\right] - C_2 C_0 \frac{I_1\left[\sqrt{s}\right]}{\sqrt{s}}}{I_0\left[\sqrt{s}\right] - C_0 \frac{I_1\left[\sqrt{s}\right]}{\sqrt{s}}} \tag{1}$$

$$= C_1 \frac{I_0\left[\sqrt{s}\right] - C_0 \frac{I_1\left[\sqrt{s}\right]}{\sqrt{s}}}{I_0\left[\sqrt{s}\right] - C_0 \frac{I_1\left[\sqrt{s}\right]}{\sqrt{s}}} \tag{2}$$

$$= C_1 \tag{3}$$

$$\textbf{if} \quad \underbrace{s \neq 0}_{\text{Already known invalid point}} \quad \textbf{and} \quad \underbrace{I_0\left[\sqrt{s}\right] \neq C_0 \frac{I_1\left[\sqrt{s}\right]}{\sqrt{s}}}_{\text{Tricky condition, will return to it}} \tag{4}$$

If those conditions are satisfied, then:

$$f(t) = C_1 \tilde{\varepsilon}_{zz}(s) \tag{5}$$

$$= C_1 \dot{\varepsilon}_0 t_g \left(\frac{1 - \exp\left(-s\frac{t_0}{t_g}\right)}{s^2} \right) \tag{6}$$

$$= C_1 \varepsilon_{zz}(t) \tag{7}$$

It will be proven later that this is satisfied only with $\nu_{31} = 0.5$. See in Figure 1 (corresponding to 1) that the numerical solution is a perfect ramp as expected at this ν_{31} value, unlike Cohen's analytic solution.

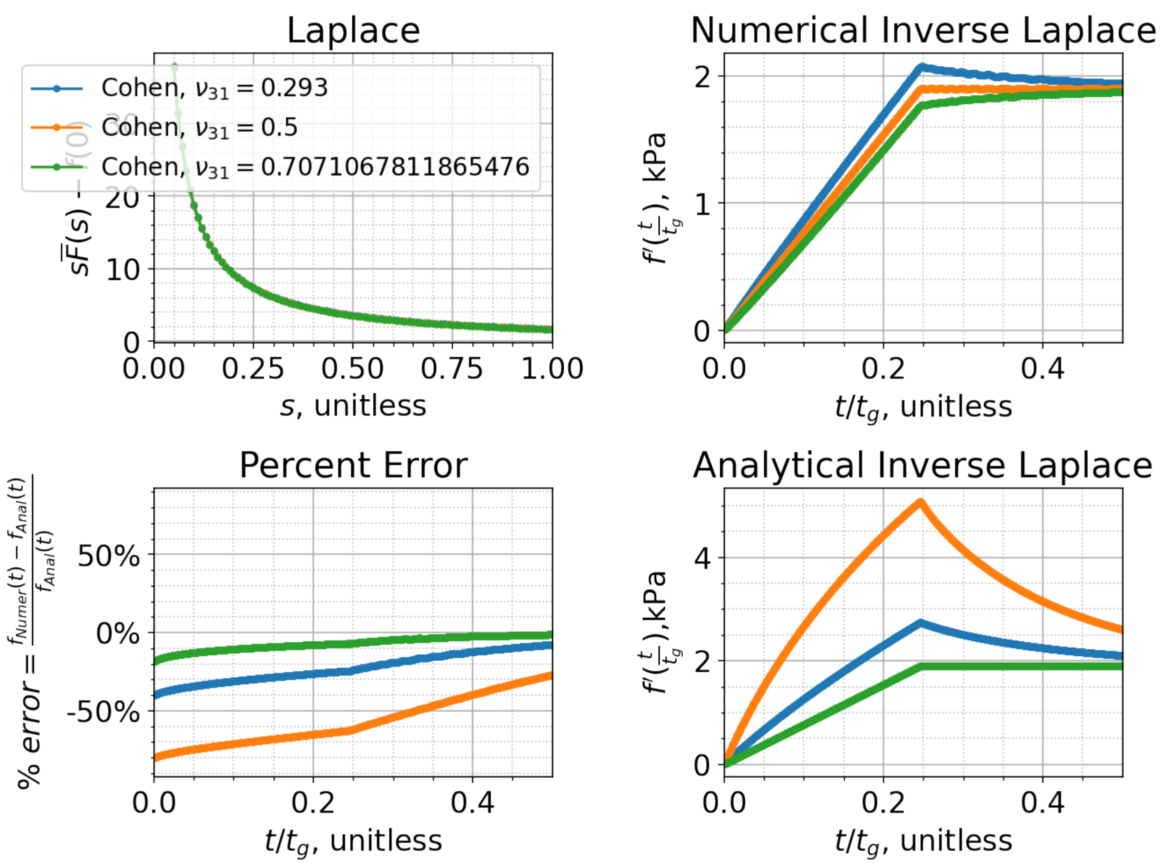

Figure 1: Note that the numerical solution is a perfect ramp at $\nu_{31} = 0.5$ as expected, unlike Cohen's proposed analytic solution.

Table 1: Paramaters for lines plotted

3 Proof 1 that $C_1 = C_2 \iff \nu_{31} = 0.5$

Set $C_1 = C_2$:

$$\overbrace{\frac{C_{11} + C_{12} - 4C_{13} + 2C_{33}}{C_{11} - C_{12}}}^{C_1} = 2\overbrace{\frac{C_{33}\left(C_{11} - C_{12}\right) + C_{11}\left(C_{11} + C_{12} - 4C_{13}\right) + 2C_{13}^2}{\left(C_{11} - C_{12}\right)^2}}^{C_2} \tag{8}$$

$$\left(C_{11} - C_{12}\right)\left(C_{11} + C_{12} - 4C_{13} + 2C_{33}\right) = 2C_{33}\left(C_{11} - C_{12}\right) + 2C_{11}\left(C_{11} + C_{12} - 4C_{13}\right) + 4C_{13}^2 \tag{9}$$

$$\left(C_{11} - C_{12}\right)\left(C_{11} + C_{12} - 4C_{13}\right) = 2C_{11}\left(C_{11} + C_{12} - 4C_{13}\right) + 4C_{13}^2 \tag{10}$$

$$-\left(C_{11} + C_{12}\right)\left(C_{11} + C_{12} - 4C_{13}\right) = 4C_{13}^2 \tag{11}$$

$$-\frac{E_1}{\Delta_1} \cdot \frac{E_1\left(1 - 4\nu_{31}\right)}{\Delta_1} = 4\left(\frac{E_1 \nu_{31}}{\Delta_1}\right)^2 \tag{12}$$

$$\left(\frac{E_1}{\Delta_1}\right)^2 \left(4\nu_{31} - 1\right) = 4\nu_{31}^2 \left(\frac{E_1}{\Delta_1}\right)^2 \tag{13}$$

$$\left(4\nu_{31}^2 - 4\nu_{31} + 1\right)\left(\frac{E_1}{\Delta_1}\right)^2 = 0 \tag{14}$$

$$\left(2\nu_{31} - 1\right)^2 \left(\frac{E_1}{\Delta_1}\right)^2 = 0 \tag{15}$$

$$\tag{16}$$

Knowing $\mathrm{E}_1 = 0$ is impossible as then $C_{11} = C_{12} = 0$
Thus, only one pair of solutions remains:

---

4 Proof 2 that $C_1 = C_2 \iff \nu_{31} = 0.5$

Strategy: get C_1 - C_2 directly in terms of constants (ν_{21}, ν_{31}, E_1, E_3), then set them equal each other.

4.1 Getting C11, C12, etc directly in terms of parameters

$$
\begin{aligned}
C_{11} &= \frac{E_1 \cdot \left(1 - \nu_{31}^2 \frac{E_1}{E_3}\right)}{(1+\nu_{21}) \cdot \Delta_1} && (17) \\
&= \frac{E_1 \cdot \left(1 - \nu_{31}^2 \frac{E_1}{E_3}\right)}{(1+\nu_{21}) \left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right)} && (18) \\
C_{12} &= \frac{E_1 \cdot \left(\nu_{21} + \nu_{31}^2 \frac{E_1}{E_3}\right)}{(1+\nu_{21}) \cdot \Delta_1} && (19) \\
&= \frac{E_1 \cdot \left(\nu_{21} + \nu_{31}^2 \frac{E_1}{E_3}\right)}{(1+\nu_{21}) \left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right)} && (20) \\
C_{13} &= \frac{E_1 \nu_{31}}{\Delta_1} && (21) \\
&= \frac{E_1 \nu_{31}}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} && (22) \\
C_{33} &= E_3 \cdot \left(1 + \frac{2\nu_{31}^2 \frac{E_1}{E_3}}{\Delta_1}\right) = \frac{\Delta_1 E_3 + 2\nu_{31}^2 E_1}{\Delta_1} && (23) \\
&= E_3 \cdot \left(1 + \frac{2\nu_{31}^2 \frac{E_1}{E_3}}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}}\right) && (24) \\
&= \frac{\left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right) E_3 + 2\nu_{31}^2 E_1}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} && (25) \\
&= \frac{E_3 \cdot (1 - \nu_{21})}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} && (26) \\
& && (27)
\end{aligned}
$$

4.2 Combinations of C11, C12, etc

$$C_{11} - C_{12} = \frac{E_1}{1 + \nu_{21}} \tag{28}$$

$$\tag{29}$$

$$C_{11} + C_{12} = \frac{E_1}{\Delta_1} \tag{30}$$

$$= \frac{E_1}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} \tag{31}$$

$$\tag{32}$$

$$C_{13} = \frac{E_1 \nu_{31}}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} \tag{33}$$

$$\tag{34}$$

$$C_{33} = \frac{E_3 \cdot (1 - \nu_{21})}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} \tag{35}$$

$$\tag{36}$$

$$C_{11} + C_{12} - 4C_{13} = \frac{E_1 (1 - 4\nu_{31})}{\Delta_1} \tag{37}$$

$$= \frac{E_1 \cdot (1 - 4\nu_{31})}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} \tag{38}$$

$$\tag{39}$$

$$C_{11} + C_{12} - 4C_{13} + 2C_{33} = \frac{E_1 (1 - 4\nu_{31}) + 2E_3 (1 - \nu_{21})}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} \tag{40}$$

$$= \frac{E_1 + 2E_3 - 4E_1\nu_{31} - 2E_3\nu_{21}}{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}} \tag{41}$$

$$\tag{42}$$

4.3 Getting C_0, C_1, directly in terms of parameters

$$C_0 = \frac{C_{11} - C_{12}}{C_{11}} = \frac{\Delta_1}{1 - \nu_{31}^2 \frac{E_1}{E_3}} = \frac{1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}}{1 - \nu_{31}^2 \frac{E_1}{E_3}} \tag{43}$$

$$\tag{44}$$

$$C_1 = \frac{C_{11} + C_{12} - 4C_{13} + 2C_{33}}{C_{11} - C_{12}} \tag{45}$$

$$= \frac{(1+\nu_{21})\left(1 - 4\nu_{31} + 2\frac{E_3}{E_1}(1-\nu_{21})\right)}{\left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right)} \tag{46}$$

$$\tag{47}$$

$$C_2 = 2\frac{C_{33}(C_{11} - C_{12}) + C_{11}(C_{11} + C_{12} - 4C_{13}) + 2C_{13}^2}{(C_{11} - C_{12})^2} \tag{48}$$

$$= 2\frac{\left(\frac{E_3 \cdot (1-\nu_{21})}{1-\nu_{21}-2\nu_{31}^2 \frac{E_1}{E_3}}\right)\left(\frac{E_1}{1+\nu_{21}}\right) + \left(\frac{E_1 \cdot \left(1-\nu_{31}^2 \frac{E_1}{E_3}\right)}{(1+\nu_{21})\left(1-\nu_{21}-2\nu_{31}^2 \frac{E_1}{E_3}\right)}\right)\left(\frac{E_1 \cdot (1-4\nu_{31})}{1-\nu_{21}-2\nu_{31}^2 \frac{E_1}{E_3}}\right) + 2\left(\frac{E_1 \nu_{31}}{1-\nu_{21}-2\nu_{31}^2 \frac{E_1}{E_3}}\right)^2}{\left(\frac{E_1}{1+\nu_{21}}\right)^2} \tag{49}$$

$$= 2\frac{E_3 E_1 (1-\nu_{21})\left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right) + E_1^2 \cdot \left(1 - \nu_{31}^2 \frac{E_1}{E_3}\right)(1 - 4\nu_{31}) + 2E_1^2 \nu_{31}^2 (1+\nu_{21})}{\left(\frac{E_1}{1+\nu_{21}}\right)^2 \left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right)^2 (1+\nu_{21})} \tag{50}$$

$$= 2\frac{\frac{E_3}{E_1}(1-\nu_{21})\left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right) + \left(1 - \nu_{31}^2 \frac{E_1}{E_3}\right)(1 - 4\nu_{31}) + 2\nu_{31}^2 (1+\nu_{21})}{\frac{\left(1-\nu_{21}-2\nu_{31}^2 \frac{E_1}{E_3}\right)^2}{1+\nu_{21}}} \tag{51}$$

$$= 2\frac{\frac{E_3}{E_1}\left(1-\nu_{21}^2\right)\left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right) + \left(1 - \nu_{31}^2 \frac{E_1}{E_3}\right)(1 - 4\nu_{31})(1+\nu_{21}) + 2\nu_{31}^2 (1+\nu_{21})^2}{\left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right)^2} \tag{52}$$

$$= 2(1+\nu_{21})\frac{\frac{E_3}{E_1}(1-\nu_{21})\left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right) + \left(1 - \nu_{31}^2 \frac{E_1}{E_3}\right)(1 - 4\nu_{31}) + 2\nu_{31}^2 (1+\nu_{21})}{\left(1 - \nu_{21} - 2\nu_{31}^2 \frac{E_1}{E_3}\right)^2} \tag{53}$$

$$\tag{54}$$

4.4 Solve for $C_1{=}C_2$

Knowing:

$$C_0 = \frac{1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}}{1-\nu_{31}^2\frac{E_1}{E_3}} \tag{55}$$

$$\tag{56}$$

$$C_1 = \frac{\left(1+\nu_{21}\right)\left(1-4\nu_{31}+2\frac{E_3}{E_1}\left(1-\nu_{21}\right)\right)}{1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}} \tag{57}$$

$$\tag{58}$$

$$C_2 = 2\frac{\frac{E_3}{E_1}\left(1-\nu_{21}^2\right)\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)+\left(1-\nu_{31}^2\frac{E_1}{E_3}\right)\left(1-4\nu_{31}\right)\left(1+\nu_{21}\right)+2\nu_{31}^2\left(1+\nu_{21}\right)^2}{\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)^2} \tag{59}$$

$$\tag{60}$$

We want to solve for $C_1{=}C_2$:

$$\overbrace{\frac{\left(1+\nu_{21}\right)\left(1-4\nu_{31}+2\frac{E_3}{E_1}\left(1-\nu_{21}\right)\right)}{1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}}}^{C_1} = 2\frac{\overbrace{\frac{E_3}{E_1}\left(1-\nu_{21}^2\right)\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)+\left(1-\nu_{31}^2\frac{E_1}{E_3}\right)\left(1-4\nu_{31}\right)\left(1+\nu_{21}\right)+2\nu_{31}^2\left(1+\nu_{21}\right)^2}^{C_2}}{\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)^2} \tag{A}$$

Multiply both sides by $\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)^2$

$$(1+\nu_{21})\left(1-4\nu_{31}+2\frac{E_3}{E_1}(1-\nu_{21})\right)\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)=2\frac{E_3}{E_1}\left(1-\nu_{21}^2\right)\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)+2\left(1-\nu_{31}^2\frac{E_1}{E_3}\right)(1-4\nu_{31})(1+\nu_{21})+4\nu_{31}^2(1+\nu_{21})^2$$

Divide both sides by $1+\nu_{21}$

$$\left(1-4\nu_{31}+2\frac{E_3}{E_1}(1-\nu_{21})\right)\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)=\underbrace{2\frac{E_3}{E_1}(1-\nu_{21})\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)}_{\text{Move to lefthand side}}+2\left(1-\nu_{31}^2\frac{E_1}{E_3}\right)(1-4\nu_{31})+4\nu_{31}^2(1+\nu_{21}) \tag{B}$$

$$(1-4\nu_{31})\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)=\underbrace{2\left(1-\nu_{31}^2\frac{E_1}{E_3}\right)(1-4\nu_{31})}_{\text{Move to lefthand side}}+4\nu_{31}^2(1+\nu_{21}) \tag{C}$$

$$(1-4\nu_{31})\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}-2\left(1-\nu_{31}^2\frac{E_1}{E_3}\right)\right)=4\nu_{31}^2(1+\nu_{21}) \tag{D}$$

$$(1-4\nu_{31})(-1-\nu_{21})=4\nu_{31}^2(1+\nu_{21}) \tag{E}$$

$$-(1-4\nu_{31})(1+\nu_{21})=4\nu_{31}^2(1+\nu_{21}) \tag{F}$$

$$-\left(1-4\nu_{31}+4\nu_{31}^2\right)(1+\nu_{21})=0 \tag{G}$$

$$-\left(4\nu_{31}^2-4\nu_{31}+1\right)(1+\nu_{21})=0 \tag{H}$$

$$-(2\nu_{31}-1)^2(1+\nu_{21})=0 \tag{I}$$

$$-(2\nu_{31}-1)^2(1+\nu_{21})=(C_1-C_2)\qquad\times\overbrace{\frac{\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)^2}{1+\nu_{21}}}^{\text{Multiplications/divisions done to get to this step}}$$

$$-\frac{(2\nu_{31}-1)^2(1+\nu_{21})^2}{\left(1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\right)^2}=C_1-C_2$$

$$\boxed{C_2-C_1=\left(\frac{(2\nu_{31}-1)(1+\nu_{21})}{1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}}\right)^2} \tag{J}$$

Since $\nu_{21}=-1 \implies C_{11}$ and C_{12} are undefined, we know $C_{11}=C_{12}$ has only one solution remaining:

$$\boxed{C_1=C_2 \iff \nu_{31}=0.5\text{assuming } 1-\nu_{21}-2\nu_{31}^2\frac{E_1}{E_3}\neq 0}$$
